

Executive Summary

Riverside Insurance Agency had a strong month with 1,847 website visits driving meaningful engagement across multiple channels. The agency handled 181 inbound customer interactions (voice + chat + forms) autonomously, while 487 automated emails maintained touchpoints with existing customers. Voice and forms are performing exceptionally well, with opportunities to improve chat adoption and activate calendar and reputation management features.

At a Glance

Inbound Traffic	Outbound Touchpoints	Website Visits
181 interactions	487 emails sent	1,847 visits
(Voice + Chat + Forms)	(Marketing + Hygiene)	

Top Wins

- 156 voice calls handled autonomously — 5.2 hours of staff time saved
- 23 form submissions captured — hot leads ready for follow-up with zero effort
- 24.3% email open rate — above industry standard of 20%

Opportunities

Feature	Status	Recommended Action
Chat	Needs Attention	Promote chat visibility to increase adoption
Calendar	Needs Attention	Add booking link to email signature and social profiles
Reputation	Not Activated	Sign in with Google Business Profile to enable

Voice

STATUS: Active

Key Metrics

Metric	Value	Insight
Total Calls	156	All handled autonomously
Successful Outcomes	118	75.6% had identified reason, callback, transfer, or appointment
Service Calls	72	61% of categorized calls
Claim Calls	46	39% of categorized calls
Time Saved	5.2 hours	Cumulative call duration

Summary

Great news! Your agency handled 156 voice calls this month without any human intervention. Of these, 118 calls (75.6%) had a successful outcome — meaning the AI identified the caller's reason, scheduled a callback, performed a transfer, or booked an appointment. Service inquiries made up 61% of categorized calls, with claim-related calls at 39%. The cumulative 5.2 hours of call time represents time your staff didn't need to spend on the phone — no context-switching, no interruptions, and 24/7 availability without anyone needing to be physically present.

Chat

STATUS: Needs Attention

Key Metrics

Metric	Value	Insight
Total Chats	2	Below expected based on traffic
Expected Chats	~90	Based on 45 avg daily visitors / 15
Average Daily Traffic	45	Visitors per day

Summary

Chat is activated but seeing lower engagement than expected. With 45 average daily visitors, we'd typically expect around 90 chat interactions per month (1 chat per 15 visitors), but only 2 chats occurred. This gap suggests an adoption opportunity rather than a technical issue.

Possible Explanations

- **Awareness gap:** Users may not realize they can chat with the website
- **Communication gap:** The agency hasn't yet communicated to customers that 24/7 chat is available
- **Experience issues:** Users may be encountering friction or having less-than-ideal interactions
- **Preference patterns:** Visitors may be choosing phone or forms instead

Recommendations

- Raise any experience or feedback concerns with the PolicyWeb team for investigation
- Consider adding a prominent chat prompt or welcome message
- Mention chat availability in email communications and social media
- Review chat widget placement and visibility on the website

Forms

STATUS: Active

Key Metrics

Metric	Value	Insight
Total Submissions	23	Hot leads ready for follow-up
Personal Quotes	18	78% of submissions
Commercial Quotes	5	22% of submissions

Summary

Your forms captured 23 quote requests this month — all potential new business generated with zero effort from your team. These are high-intent leads: people who took the time to fill out a form expect a callback as soon as possible. The breakdown shows 18 personal quote requests and 5 commercial quote requests. Every single submission represents a customer who reached out on their own terms and timeline, and your agency captured that opportunity automatically. These leads are ready to contact immediately.

Website

STATUS: Active

Key Metrics

Metric	Value	Insight
Total Visits	1,847	Your digital storefront is active
Click-to-Call	89	People wanting to speak directly
Click-to-Email	34	People reaching out via email

Summary

Your website served as a strong digital storefront this month with 1,847 visits. Visitors are taking action: 89 click-to-call events show people wanting to speak directly with your agency, and 34 click-to-email actions indicate additional outreach. These engagement metrics prove the website is doing its job — building trust and authority with potential customers researching online, then converting visitors into prospects and leads. Every click-to-call and click-to-email represents an engaged potential customer taking the next step.

Email

STATUS: Active

Key Metrics

Metric	Value	Insight
Total Emails Sent	487	All sent automatically
Open Rate	24.3%	Above 20% industry standard
Total Clicks	12	Engagement beyond opens

Summary

Great news! Your automated email campaigns sent 487 emails this month with a 24.3% open rate — above the industry standard of 20%. Your emails break down into two categories:

Cross-sell/Upsell Emails (~50%):

- Approximately 244 emails focused on driving additional revenue and policy growth
- Estimated 59 of these were opened by recipients

Hygiene Emails (~50%):

- Approximately 243 emails for renewals, birthdays, and retention campaigns
- These touchpoints keep your agency top-of-mind and strengthen customer relationships

The 12 clicks are a win — clicks are rare since most recipients read emails and then call or take no immediate action. Any clicks indicate strong engagement. Cross-sell emails drive incremental revenue, while hygiene emails strengthen retention and renewal rates. All of this happened automatically with no manual effort from your team.

Calendar

STATUS: Needs Attention

Key Metrics

Metric	Value	Insight
Meetings Scheduled	0	Opportunity to activate
Meetings Held	0	No meetings this period

Summary

Calendar is activated but hasn't been utilized yet. This is a visibility and habit issue — the tool works, it just needs to be promoted and used consistently. Every meeting booked is an opportunity to close business, and agencies who meet face-to-face (in person or virtual) have a much higher chance of closing new policies.

Recommendations

1. Email signature integration:

- Create a booking link and add it to your email signature with text like "Schedule time with me"
- Bookmark the booking link for easy access — anytime there's a relevant opportunity to schedule a meeting, quickly copy/paste the link into emails or texts

2. Social media promotion:

- Add your booking link to social media channel profiles
- Include the booking link in relevant social media posts to drive meeting requests

☆ Reputation Management

STATUS: Opportunity

Key Metrics

Metric	Value	Insight
Google Reputation	Not Activated	Feature available to enable
Email	Active	AMS integration confirmed

Summary

Good news: your email automation is already active, which means we're integrated with your AMS. To activate reputation management, you just need to sign in with your Google Business Profile.

What You're Missing

Once activated, the system will automatically:

- Send private feedback emails to gauge customer satisfaction
- Screen out potentially negative reviews by only requesting Google reviews from happy customers (NPS 8+)
- Request Google reviews from satisfied customers
- Help you accumulate 5-star reviews that boost your Google ranking

Why This Matters

- **Trust and credibility:** Google reviews build trust with potential customers researching your agency
- **Search rankings:** Higher star ratings and review volume improve your Google search rankings
- **Local visibility:** More visibility on Google Maps when people search for insurance locally
- **Automatic protection:** The system screens out bad reviews by gathering private feedback first

Next Step

Sign in with your Google Business Profile to enable automated reputation management. This is a one-time setup that unlocks ongoing, automatic review generation.

Monthly Totals

Category	Metric	Value
Inbound	Voice Calls	156
